1. Start by securing the feet to the bottom of the posts. These will help balance the rack in a variety of situations.
2. Next you will need to attach your split sleeves to the bottom of the posts with the lines matching up. Make sure the split sleeve is in the same position on all four posts.
3. You can now run your post through the holes on the bottom shelf. Move the longer end of the posts through the shelf first for the split sleeves to function properly.
4. Once finished, you can stand up your rack and make sure the shelf is secure against the four posts by tapping the shelf with a rubber mallet.

5. Measure 64 inches from the top of the bottom shelf to the top of the next split sleeve. This will ensure that your top shelf is level and at the proper height for the divider panels. Once you finish, you can place the top shelf on your rack. Tap the shelf with a rubber mallet to ensure it is secure.
6. You are now ready to install your grid dividers. The space between these will match with the model purchased. * If you purchased an 18-inch model they will be 18 inches apart, just as if you got a 24 inch model they'll be 24 inches apart.
7. Once you're sure your divider panel is straight, you can now put the top on, securing it to the rack.

IF YOU HAVE ANY FURTHER QUESTIONS PLEASE CALL 800-991-2120 FOR ASSISTANCE.

8. Add two shelf grippers to the top and bottom, as shown. This will secure your divider panel to the shelf. Repeat this step for the rest of your divider panel.
9. Slide the included hanging pull through the top middle section of the divider panel. Secure it to the shelf using the hanging hooks.
10. Last, attach the 4 inch back ledges to both shelf levels by sliding the wire bottoms over the quarter inch truss wire.
