- Click "Videos" tab to find the video:
  - "How To Assemble The HW-1 Hose Winder"
  - "How To Use The HW-1 Hose Winder"

1. Start by having one person to take the body of HW-1 and hold it against the desired product that is compatible with it. The HW-1 is also compatible with any 2<sup>1/2</sup> inch square posts.
2. Have the second person insert the bolts, washers, locking washers, then nuts to the side of HW-1 Mounting Bracket be sure everything is very tight and secure to the mounting bracket so it can withstand the weight of winding hoses.
3. Next you will need to grab a preassembled handle and slide it through the body of the HW-1. Be sure the handle is on the opposite side of the hose threading. (As shown in the above image)
4. You can now use your Philips head screwdriver to tighten the screw at the end of the handle.
5. Grab the male guide blade and slide it on to the other side of the now attached handle. When sliding it through the handle's rail, be sure the flat section lines up with the screws. Then tighten the screws with your hex wrench.
6. Next grab the female guide blade and fit it onto the rail with the elevated hole going towards the body of the HW-1.

With your HW-1 now ready for use, you can learn more about using the product by watching our HW-1 videos on our Youtube Channel!
